

IRAY AT300 Thermografic Camera / Temperature measurement System

Protect your employees, customers and suppliers with the efficiency of AT300 thermographic camera from IRAY

Corona virus containment is an acute issue. A large number of employees or customers can be put into quarantine as a result of individual infections in companies, hospitals or at events.

In addition to the serious health consequences, operational failures and loss of income are the consequences.

Equip your business with the AT300 thermographic camera from IRAY. People with elevated temperature can be reliably detected.

With a total of over 900 systems installed worldwide, we offer a complete and proven measuring system.

Use the advantages of our camera:

- People can be measured in passing and do not have to stand still
- Our software recognizes the human face and can ignore hot objects like coffee cups
- With our system we measure the temperature on the lacrimal gland (eye) and thus achieve a very high accuracy
- Our system uses a black body radiator that compensate for temperature fluctuations, for example through open windows (draught) 1:1
- Our cameras are data protection compliant. No person can be recognized with the thermal imaging camera. At the same time, we measure within 0.5s and detect the temperature rise very quickly
- The system can run autonomously and requires no additional security staff

Applications with the IRAY AT300

- Airports
- Shopping Centre
- Food industry
- Schools
- Hospital
- Public offices
- Production plants
- Logistics Centre

Use the AT300 system in many ways:

- To screen employees, customers or suppliers
- For self-control of the employees when symptoms with increased temperature occur
- To give employees a clear signal that the situation is being taken seriously
- To protect the company premises, so that outbreaks can be avoided
- and to avoid, that a large part of the personnel is put into quarantine

Choose an AT300 system from Emitec Messtechnik AG

- Over 120 satisfied customers, who have installed more than 900 AT300 systems
- Professional support during setup of the camera
- Operating our own calibration & repair shop, we provide after sales services and maintenance for your equipment
- All our employees are trained as thermographers and certified (EN/ISO 9712)
- We are in temperature measurement field for more than 20 years
